

Installation Instructions

Install Instrument with 1.5m free space (from widest point) around it.

1. Lay packaging out on floor and clear workspace with **non-abrasive surface** for assembly to prevent marking of polished stainless steel.

2. Unpack surface fix posts and plate.

3. Sheath posts over the surface plate stanchions in the order shown in image (1).

4. Secure posts to surface plate with M10x30 Security Screws with provided Driver bit.

5. Locate instrument's desired location and mark holes to fix to desired surface.

6. Fix to surface using recommended ground anchors (**ground anchors are not supplied**), making sure all fixings are covered using cover caps provided.

7. Unpack Liberty Bell chimes.

8. Remove nylon nut and 15mm spacer to expose pre-threadlocked thread.

9. Align the first small chime grate with the dowels on the end of the smallest post. Screw C5 (Indigo) chime onto the smallest post, over chime grate.

10. Repeat in ascending order of post height, matching the bells in ascending order of size. The three small chime grates match with the three smaller bells, and the three larger grate match with the three largest bells.

CAUTION: Frame surface can get hot in direct sunlight, if possible install in shaded areas.

Liberty Bells
Page 3 of 3

1. Align chime grate with dowels and place on end of post. Ensure you have matched the correct grate size to the post (the larger match with the three larger posts and bells).

2. Select matching bell to secure onto the post. Align and gently begin to fasten clockwise.

3. With comfortable alignment, continue to rotate bell down onto post until fastened securely. Pre-applied threadlocker on the end of the bell's screw will prevent the bell from unfastening.

4. Lastly, tighten pan-head screw on top of bell gently with spanner (16mm or 5/8inches).
